Original presentation

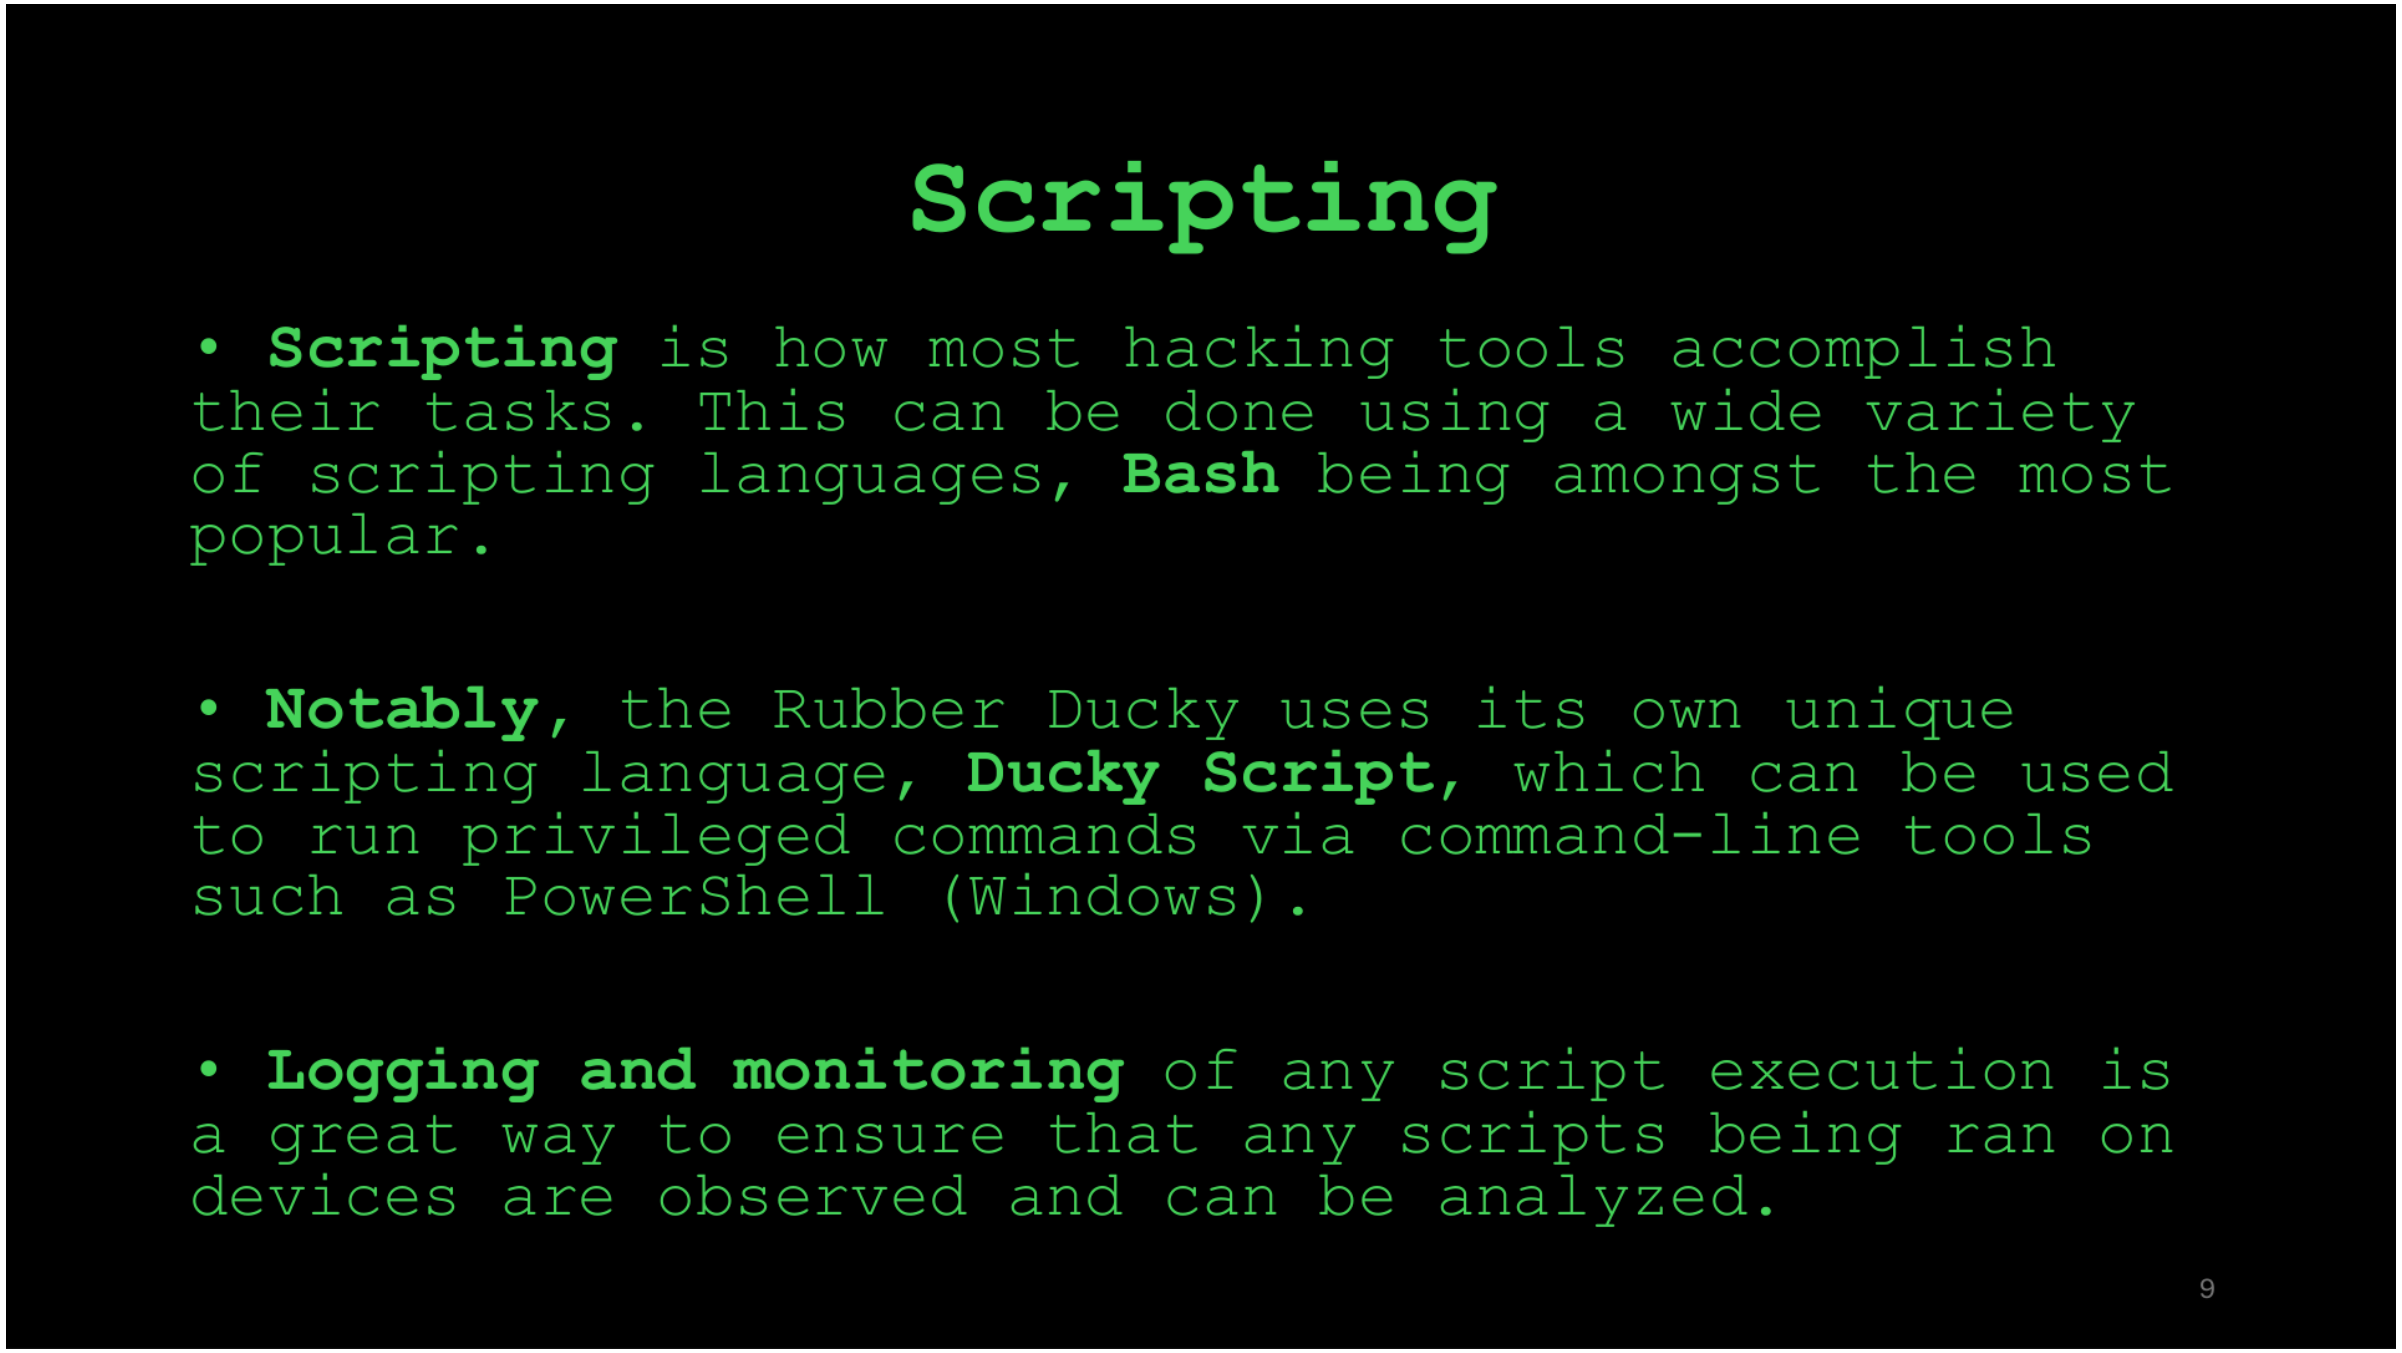

Title slide from the cybersecurity presentation I prepared through an Upwork engagement in September 2024.

Explaining a practical security tool

Original slide on keystroke injection and example mitigations. Impact depends on the active session, permissions, and endpoint controls.

Connecting scripting with defensive visibility

Original slide connecting scripting and command execution with logging and monitoring.

Drawing on earlier training experience

My work at Canadian Nuclear Laboratories

Canadian Nuclear Laboratories | Laboratoires Nucléaires Canadiens

- Created **"Attack Modules"** that were to be used for a set of IR (Incident Response) training exercises for Nuclear Energy Workers.

- The attack modules included
  - research about each tool's capabilities
  - where it falls under **MITRE ATT&CK** (a knowledge base of adversary tactics and techniques)
  - its impact on each stage of the **NIST** framework
  - a step-by-step procedure to be used by trainees

10

Original slide describing my earlier CNL training work, which informed the freelance presentation.
