TEAM ACADEMIC STUDY | FEBRUARY - MAY 2025

Lung tissue classification experiments

Co-authored work on hyperparameter optimisation, augmentation, and ensembling.

Three classes: benign tissue, adenocarcinoma, squamous cell carcinoma

Interpretation

These are selected experiment results reported in the team paper, not a controlled attribution of gains across identical settings. Patient-level external validation and clinical utility are not established.

Deep Learning for Cancer Detection, Results | Academic image-classification experiments.

ORIGINAL WORK SAMPLE

Inspecting classification errors

Original confusion matrix and caption for the MinAug-MajAug model, evaluated on the project test set.
